

ΕΦΗΜΕΡΙΣ :  
OR, A  
DIARY

ASTRONOMICAL  
AND  
ASTROLOGICAL

For the Year of Grace 1663.

CONTAINING

- I. The Motions and Aspects of the Planets, Eclipses of the Luminaries, Full sea, Mutation of the Air, &c.
- II. An Enquiry into such Accidents as may befall these Islands the ensuing year : with some Reflections on the great and famous Conjunction of Saturn and Jupiter Octob. 10. which happens but once in 795 years.
- III. A Demonstration of the truth of Astrologie in six Arguments : with many other profitable Observations.

BY  
JOHN GADBURY

LONDON:

Printed by JAMES GOTTREL, for the  
Company of Stationers.

To  
The most worthily Accomplished,  
And

Eminent Honorer of Arts & Sciences,  
FRETSWALD HOLLES Esq;

JOHN CADBURY,

In testimony of the Honour he bears  
unto his Vertues,  
Humbly presenteth these his

ASTRONOMICAL

And

ASTROLOGICAL

Endeavours.

# The Use of the Book.

Every Month contains two pages; a Right, and a Left.

## The Left-hand-page Explained.

This page consists of 12 Columns. 1. The Month-days. 2. The Week-days. 3. The Festivals. 4. The Suns place. 5. The place of Saturn. 6. The place of Jupiter. 7. The place of Mars. 8. The place of Venus. 9. The place of Mercury. 10. The Moons place. 11. The place of the Dragons head: all in Longitude, as they are by Calculation found in the Ecliptick. 12. The mutual Aspects and Weather. At the top of this page, are several Poetical passages alluding to the influences of the Coelestial Bodies in each Month.

## The Right-hand-page unfolded.

This page is furnish'd with eight Columns. The first contains the Month-days: the six next, the Moons Aspects to the Planets: and the eighth shews the hour and minute of Full Sea at London-bridge every day. Over the head of these, are placed the several Lunations: being conceived of more Vulgar use than the Column of the Moons Aspects to the Sun.

## Vulgar Notes.

Julian account.

11	Golden Number.
20	Cycle of the Sun.
D	Dominical Letter.
1	Epact.
29	Number of Direction.
15	Septuagesima.
4	Dies Cinerum.
19	Easter-day.
24	Rogation-Sunday.
28	Ascension-day.
7	White-Sunday.
29	Advent-Sunday.

Gregorian account.

11	January.
20	February.
0	March.
31	April.
32	May.
31	June.
30	July.
31	August.
30	September.
31	October.
30	November.
31	December.

# A Table of the Kings and Queens of England.

Their Names	Birth	Began to reign	Reign no.	Their reigns end
William Con.	1028	Octob. 12 1066	20 11	Septemb. 9 576
William Rufus	1057	Septem. 9 1087	12 11	August 2 563

King James.	1566	March 24 1603	22 0	March 27 39
Charles 1	1600	March 27 1625	23 11	January 30 19
Charles 2	1630	January 30 1648		

## God save the KING.

*If Kings are Gods below, be then must be  
 Accused of the biggest Blasphemie  
 That speaks or thinks them ill: but he that sits,  
 [And by bad Patterns, commits horrid Facts]  
 He runs the Road to hell! and (at his cost)  
 May finde his soul, shall finde his labour lost.*

# What part the Moon governs in Mans body, being in any of the Twelve Signes.

Head and Face.

♈ Mans Head and Face; Heavens Ram obey;  
 ♉ His Neck, the Neck strong Bull doth sway;  
 ♊ The twin-ning Twins guide Hands and Arms;  
 ♋ Brest, Sides and Stomach, Cancer charms;  
 ♌ The Lion rules out Back and Heart;  
 ♍ Bowels and Belly's Virgo's part;  
 ♎ Reins, Haunches, Navil, Libra friends;  
 ♏ Bladder and Secrets, Scorpio tends;  
 ♐ The Half-bred & Haw-man claims the Thighs;  
 ♑ And to the Kid our Knees suffice;  
 ♒ Our Legs are but the Builders Pees;  
 ♓ The Fish our Footsteps oversees.

## The Planets Characters.

♄ Saturn  
 ♃ Jupiter  
 ♀ Mars

☉ Sol  
 ♀ Venus  
 ☿ Mercury

☾ Luna  
 ♏ Dragons Head  
 ♏ Dragons Tail

## The Characters of the Aspects.

♂ Conjunction.  
 \* Sextile.

♀ Opposition.

◻ Quare.  
 ⚡ Trine.

January bath xxxi days.

The Year begins well : the best Trinity  
Are kinder to us than our selves can be :  
They know our wants, they know when to supply ;  
They know what's fit to grant, what to deny.  
Planets themselves can't wander from their will,  
And for this month prove us sure no ill.

No more! I am sorry! cloud my face now:

Full Moon the 13 day, at two after noon, in the morning.

Full Moon the 15 day, at five in the morning.  
Last Quarter the 21 day, at five in the morning.

Last Quarter the 27 day : at four in the morning  
 New Moon the 29 day : at four in the morning

THE EXHIBIT

[illegible]

**February hath xxviii days.**

No more, *Flambello*! cloud thy brazen brow:  
 Must Truth be outlaw'd? not thy Enemies too?  
*England*, beware: Foxes may scalp thy Vine;  
 And some may drive & adulterate the Wine:  
 Thou labour'st to correct: But let them know,  
 They work their ruine, leech thy overthrow.

Bless us (good God!) from another unreasonable Spring; and from intestine Jars and Quarrels: from Disobedience to our Superiours, and from Flatteries and Sycophantique Practices, like the Jews of old, who one day cryed *Hosanna*, and the next, *Crucifige*. Let the Adversaries to England's peace be discovered; and let not Floods make Monks among us: &c. Let not the feigned preferences of some, be valued beyond the worthy actions of others.

And although *Jupiter* this month be Squared three times, yet let the Clergie be honoured, and the Service of the Church be followed. And let all know, that *St. Cyril* us'd a home Truth, when he said, *Non habet Deum Patrem, qui non habet Ecclesiam Matrem.*

*Eclipsis Solis inconspicuo.*

# March hath xxxi days.

London! great Chronos station points at thee,  
And doth denunciate infelicitie  
Unto thy Children: Merchants feel the smart,  
So do thy Trades-men too, in every part.  
Thy Seniors stoop; thy Honours do abate;  
And thou must be content; for 'tis thy Fate.

# April hath xxx days.

The several Trines the fruitful *April* bears,  
May yeeld us Wheat, in stead of useles Tares;  
And so remit (for some small time) the threats  
Of angry *Chronos*, and his rigid fates:

But they'll return again, ere we be eas'd;

“For fullen Natures are not soon appeas'd.”

God grant the Plague, or some such like distemper, do not now begin to rage, chiefly in the East parts of the Citie. Well may the traders of the world complain, when Trade it self decays. Nor will the Merchants of this great Citie have cause to boast of their gains; rather (in my opinion) to be sorrowful they are so small.

About an hour before the Sun rises, ♂ and ♀ may be seen in Conjunction, in the East. It is a Conjunction very rare to be seen; and therefore richly worth the notice.

# May hath xxxi days.

April was not so kinde, but May's as cross,  
And in her Aspects (nearly ten times) worse.  
The Stars oppose each other; and so darts  
Their sharper Influence at poor mortals hearts:  
Whence Sickneses and other mischiefs grow:  
Oh! that we could prevent, as well as know.

*Non est in Medico semper relevatur ut peger e*  
*Interdum Doctus, plus valet Arte malum.*

*That is,*  
 The Doctor cannot always help the ill:  
 The sickness sometimes is beyond his skill.

At nine of the clock this evening, the Moon will approach the bodies of Saturn and Jupiter; the being but a little removed from Antares, or The Scorpions heart. It will be in the East, and very pleasant to observe.

# June hath xxx. days.

Last June, heav'ns frown'd; but here they gently smile,  
And court the earth with *Halcyon*-days, a while;  
Anon, they send their friendly gales, to fan  
Distempers from the troubled heart of man.  
Corn ripens apace, and *England* now may cry,  
"Juno's a Goddess of Fertility."

On the 8, about 9 or 10 at night, the Moon will be seen in Conjunction of the benign Planet ♃, and may be seen also, a little to the East of them both. Over the head of it, they all three will be seen in the Meridian, or heart of heaven.

*Italy de judiciis Astorum, fol. 329, saith, The ♂ of ♃ and ♄ denotes, — accident hominibus multa placita, & totas suspensionem concipiet de alio furti, &c.*

# July hath xxxi days.

This strange the verdure of the last moneth good,  
Should be by men, no better understood:  
And yet not strange; if the late nefarious Time  
Be call'd to minde; wherein 'twas held a Crime  
Goodness to act. Here the most shameless Sins  
The moneth doth end, continues, and begins.

# August hath xxxi days.

The Moon the eighth day veils her silver head,  
Just as bright Sol steps in his Western bed :  
She screens her beauty with Earths blacker stuff,  
As if ashamed to see his Mantle off.

Thus Nature Lectures reads of Modesty,  
Inviting men to learn of them on high

**Moon eclipsed visible.**

*Proclus* saith, An Eclipse of the ☾ in the last decad of ♈, animates the mindes and inelinations of men to instability, and makes them run after Novelties.

**Eclipse Solis inconspicua.**

On the 29 day, about eight at night, the ☾ may be seen in the West, between the bodies of ♈ and ♎, if clouds do not interpose.

# September hath xxx days.

The Planets severall friendly Rays do bring  
Content unto the People, Priest and King :  
The Learned now are honour'd ; and do gain  
Preferment too ; as price of Studies pain.

Had I a *Joshua's* power, the Sun should be  
(Great *Jove*) in Sextile always unto thee.

♀ is now a very glorious evening-  
 Star, she being occi-  
 dental in her greatest di-  
 stance from the Sun.

The \* of ☉ and ♄, significat  
 quod Lex & Sapientia erit appa-  
 rens & manifesta, & quod erit  
 honorati & in p<sup>re</sup>sentia illius  
 entes, & maxime illi Legis: Haly  
 dixit, in Jadic. Astr. fol. 392.

Let Sword and Shield give place  
 to Gown, & admit  
 And give the Tongue the Lau-  
 rel Crown.

Cedant Armis Toge.

# October hath xxi days.

'Tis ten to one, but that some Prog-men will  
(According to their shallow inhiute skill)  
Threaten the world, with Rapine, Wars, and Bloud,  
(And other things themselves ne'er understood)  
Upon this great Conjunction: when (poor men)  
They ne'er did see the like, nor shall agen.

## Conjunction magna ♄ & ♀.

It happens but once in seven or eight hundred years; its effects therefore cannot be discovered by the wisest of mortals. We may say, They will be famous; but what they shall be, or when they shall appear, Astrologie hath no tongue to declare. Let us therefore warily eye the Providence of God in those Mutations, (whether good or evil) that this eminent and unusual Congress is the precursor of

I know Holy Saith, -- *quando* ♄ jungitur cum ♀, significat mortem Regis magni & potentis, & multas locustas. But he speaks onely of ordinary Conjunctions, which happen once in twenty years.

# November hath xxx days.

If Authors speake but true, this month will be  
 An Ulber of most happie Harmony  
 Unto all sorts of persons: Kings will strive  
 Both Law and Justice to preserve alive:  
 Mean men obedient are, lyes and deceit  
 They shun; and aim at things of better weight.

☉ in △ ♈ significat quod Reges docebunt legem & rectitudinem, & judicabunt per eam; dixit Haly, 393.

From the ninth day to the 10, the fiery Planet ♈ may ebe-ry night be seen in conjun-ction with that glorious Star called Baalshem, or The Lion's heart. The 12, at 02 about 4 02 5 in the Morn-ing, they will be seen in con-junction partly, nere the Middle of heart of Heaven.

Quum Sol jungitur cum Saturno, significat quod mendacia & dese-ptiones remouentur ab hominibus Haly.

God grant my Author to be in the right, in this Prediction

# December hath xxxi days.

Thus have I run my Stage, long as the Year,  
To perfect others in this Princely way:

If I am blam'd for following Truth too neer,  
I can avoid it in my next Essay.

Yet let such know, that at the Truth repine,  
The Oar is richest, that's without the Myne.

The Quartile of Mars and Mercury will incline the minds of nimble-witted fellows to actions of Knavery; as, counterfeiting Moneys, forging Writings, and Cozenages of all sorts and sizes. And some of these Cheats may be piously performed too; Sanctity may appear in his face, that hath nothing but Villany in his heart. ♀ is in ♌ in *domus Jovis*.

This 15 day, about five in the morning, the Moon will be seen with ♀ in the East, but separating from her body: yet, they both having great North-latitude, will seem (to the eye) as if they were in exact Conjunction. It is a Congress worth a Telescopical observation of the industrious Astronomer.

# A general Judgement on the Year 1663.

## Judicium Astrologicum.

**A**strologers tell us, — Luna & dominus Annus ostendunt  
 p[ro]p[ri]os, Sol & Decima Reges; Jupiter & Nona Eccle-  
 sias. Incent. Ruct. Ap[er]ior. 146. It is then an  
 Prince and their Subjects likely to agree this year; the one  
 aiming at acts of indulgence and kindness, the other, at acts  
 of obedience and loyalty. For here in this Figure, the Sun is  
 in the sign of Aries, and the Moon in the sign of Taurus, which  
 is a sign of peace and concord.

*The Fate of the Year predicted.*

Lord of the year, and Significator of Kings and Princes, &c. besides, *Venus* is in the tenth, in Conjunction of *Mercury*, and Trine of *Luna* and *Jupiter*; which will incline Magistrates to mercy: and the Moon is in the Dignities of the Sun in the second House; thence in Trine of *Saturn* and *Jupiter*; denoting, how much Obedience and Duty adds to the advantage of the Commonalty in general.

*Hally*, speaking of the several Planets governing the year, they being well disposed, as the Sun is in this Figure, saith:

*Et si Sol talis fuerit, iustitiam regis & pietatem & mercedem & bona facta significat, fol. 369.* And when Princes shall be just, and merciful, and pious, if People will not be obedient and quier, — *fiat iustitia*; Let their Protestations be voted down, without a Parliament? But *Hermes* (as quoted by *Hally*, for I have not his Book my self) puts us in good hope that the People will have other prevailing Reasons to be quiet and peaceable, (although not better) besides the Piety, Clemencie and Justice of their Governours: His words are these: —

*Si quando M., & Q. & Q., ac D., fuerint iuncti, significat bonum statum hominibus, ubique lucra multas, fertiles glurias, &c.* *Hally*, pars 8. Cap. 5. They are not (it is true) in Conjunction all of them; but their Beams are united to each other by the most noble of Aspects, the Trine: Ergo, the Aphorism is fully as effectual for the good of the Commonalty, as if they had been in Conjunction: and it is common among Astrologers to understand the word Conjunction, as Uniting, either by Beams or Bodies.

Having been brief on this Theam, I come to consider *Jupiter* and the ninth House: which in this Revolution, hath fully the signification of Church-men: and I am apt to believe they will not escape the malice and venom of malignant Tongues this year; for *Mars* and *Cauda Draconis* are posited in the ninth House: and this the rather, because *Mars* is in Quareto of *Jupiter* therefrom. Howbeit, *Jupiter* having the disposal of him, and he being in Reception of *Venus*, and the Moon in Trine of *Jupiter* also, the Clergie will flourish and be honored, (as they do deserve to be) and their Enemies will come within the verge of their power, and be compelled to give satisfaction for their insolent injuries, and reasonles hatred and Conceit: and this I am the more persuaded of, because

*The state of the Year predicted.*

Holy saith; (and without doubt he had reason for his assertion) *Jupiter junctus cum Saturno, prohibet omne malum*; Holy sol. 361.

And now I am speaking of *Jupiter* and *Saturn* their being conjoyn'd, give me leave to acquaint you, that the Conjunction they now make, is a great Conjunction indeed; and so without doubt will be attended with great and famous Effects: but what Effects these shall be, the wisest of Mortals must of necessity be to seek in; for it is a Conjunction that happens but once in seven or eight hundred years, if we may credit *Cordanus*; (if not, take we but the pains, and we shall easily prove it our selves.) — *you* *Cordanus* in his Comment, on *Ptolemy*, *Eccl.* saith; *That the Conjunction of Saturn and Jupiter from Aries to Aries, is but once in 995 years; regard being had to the change of the Tropic, [and it is the very same term of time from Sagittary to Sagittary:] and the change of their Conjunctions from one Tropic to another, happens but once in 100 years.* This Discourse of *Cordanus*, is excellently well rendered in English by my learned friend *Capt. George Wharton*, in his *H. E. M. E. R. O. L. O. G. I. A. M.* for the year 1658. unto whom I refer those that have not the happiness to meet with *Cordanus*. However, it is ten to one, but we shall have some busy Astrologers be bawling into the Ears of the world many strange Effects to cause heedlesse; and it may be, they will be so bold as to name them; whom alas! it is impossible for them to have any experience of what Effects can attend it. If they shall say, History or Chronologic tell them so and so it fell out seven or eight hundred years since, after such a Conjunction, which may reasonably be thought the Effects thereof: I shall tell them again, That Eclipses, or other Conjunctions or Revolutions, &c. may signifie them, for anything they can object to the contrary. What reason then can they have, to attribute such kind of Effects to such a great Conjunction? Again, if I should allow a probability of truth in this their far-fetched Guess, they may be still conceiv'd to shoot wide the Mark, and be catch'd with a non-cause in the stead of a true cause, for, to pretend to set a Figure of such a Conjunction, can be no less then the highest of presumptions in any; and to pretend to give Judgement with such a Position, cannot but be gross ignorance, if not palpable madness.

*The State of the Two Planets*

My worthy friend, Mr. P. Wing, in his Ephemerides speaking of this famous Conjunction, faith, "To reach a Scheme of Heaven at the time of this Conjunction, is too great a Curiosity for any to attempt: I wish we did but judiciously consider the great difficulty in observing the true places of the Stars and Planets with Instrument, we shall were such niceties; for I am confident the most curious Observers upon the earth, though his Instrument be never so large and exqu. sively divided, yet may fail two or three minutes at some times, in taking the place of a Star, as Tycho himself hath sundry times experienced; who with his Co-adjutors and Assistants, did usually make several Observations of each, in different places, about taking the Longitude and Latitude of one and the same Star: So that hence the Tables built upon Observations, must of necessity fall somewhat of truth, though not so much, being directed by an able Artist. As in this Conjunction, should we fail but one minute in the place of each Planet, we should fail of the time of the Conjunction, no less than eight whole hours; which with the best Instrument that can be used, is scarce discernable: the former proof sheweth, I leave to the consideration of a he. Judicious, but not to the fanatical & every vulgar Reader's eye. *Veneras adium part.* Thus far Mr. Wing. Besides, should these Pretenders have it granted, that a Figure hereof were to be obtained, (which you see is absolutely impossible) yet I would know of them, how many of time they would follow, in appointing the Effects thereof to initiate, continue, or conclude. In many instances, I have seen such a measure of time, as in Belpheyr, and why why as idle, to give the same name to agree with, as in the Nativities, viz. a degree for a year. If we should observe the same measure to be good in great Conjunctions, with Eclipses, and take the Salary, viz. an hour to signify a year; look how many hours those two Planets may be in Conjunction, so so many years must their Effects continue. In this Conjunction, we have now under discussion, Saturn and Jupiter will not be separated one degree in 20 days: if then verifiably 20. by 24. the product will be 480. and hence the Effects hereof should remain as many years. But should we suppose another manner of measuring in their Effects, which may be to call

## Of the Eclipses this Year 1663.

forgetful Reason, says as in Eclipses of the Sun, an hour for a year; and these Eclipses commonly happen every year: so in these Conjunctions, they happening but once in (near) 800 years, if we should assigne for every hour they are in conjunction, as many 800 years; In what Revolution of time could the world hope to see a period put to the effects of one great Conjunction?

## Of Eclipses this Year 1663.

FOUR Eclipses will this year happen; two of the Sun, and two of the Moon. But the two Solar Eclipses will not be visible unto any part of Europe; whereas the Lunar defects will be conspicuous unto most parts thereof, as well as England in particular.

The first Eclipse will be of the Moon, on Thursday the 12 of February, in the morning.

The Beginning	}	of the Eclipse is	2 45	P. M.

The End				

Digits eclipsed  
This Eclipse begins in the tenth Halfe; and ends in the eighth. God grant to be the precursor of no Mortality.

The second Defect will be of the Sun, on Friday the 2 of February, in the afternoon; and will be visible in the South parts of the earth in *Magellania*, towards the Antarticke Pole; and such places that are unknown to us.

The third, is of the Moon; and will be visible and total (though not General) it may be seen at London on Aug. 8. in the evening.

The Beginning	}	of the Eclipse is	8 10 37	P. M.

This

### *That Astrologic is demonstrable.*

This Eclipse begins in the Ascendant, it periods in the eleventh House. It seems thereby to intimate the breach of Leagues, Amity, and Friendship amongst many, and raise up many durable Enemies in the room thereof. It happens in *Aquary* a fixed Signe, and in the House of *Saturn*.

The last is of the Sun, and happeneth on *Aug. 22.* in the evening; but will be inconspicuous to us, because the Luminaries are both under the earth: yet it will be visible in *France*, *Granada*, and in the places bordering upon *Virginia*, &c. Thus much of Eclipses.

### *That Astrologic wanteth not Demonstration.*

**T**He grand unhappiness Astrologic this day labours under, (next unto the abuse it suffers by Ignorantes pretending to it) is, the Antagonists belief that it is not to be demonstrated as Geometry and other parts of the Mathematicks. I acknowledge there are many things therein very difficult to understand, and also to make plain, to prejudice persons especially: but this maketh not the Art indemonstrable to those of a season'd understanding, and more gentle enquiry. There are certain *Nodi* in this Art, (besides those Meridional and Septentrional, that ascend on each Planet) which require curious care to untie; and profundity of judgement, and large experience, either to censure or commend. I shall therefore make this following Essay toward the proving of it demonstrable; and (for Method sake) shall first enquire

#### *What Demonstration is.*

**R**hetoricians call it *Ensis*, and tell us, it signifies an evident proof made of any thing in question: and they derive it from *enesis*, which is evidently to shew or prove, by Reasons and Arguments drawn from a general Experience of the certainty of the matter or thing defended. For the better Explanation of the term, according to the Definition, I shall offer this Distinction. *Demonstration is either probabilis or realis* (i. e. the probability of the thing, or the certainty of the thing).

### *That Astrologie is demonstrable.*

It is then said to be Real, when it conspicuously convinceth the Sense, and maketh things doubtful appear, to its undeniable Satisfaction: as, Twice Two, make Four.

It is then said to be Probable, when it affords a genuine proof of the matter in question, and therewith satisfies the Reason of man, although the Sense have no apparent knowledge thereof. In this later sense, the Magnitudes and Distances of all superlunary bodies, the Antipodes, the *motus terra*, &c. are onely demonstrable: for the Sense herein is no manner of way concerned; neither can it receive any proof or demonstration thereof at all, but as it is a handmaid to Reason. If then the demonstration of the greatest things be but probable, and yet convective and satisfactory to the most noble part of man, his Reason; Astrologie is not to be less, but the more honoured, for not coming within the perimeter or cognizance of his brutish part, *viz.* Sense.

This premised, I shall proceed to several Arguments which prove Astrologie demonstrable: and the first I shall propound, offers it self from the Definition, &c. thus—

1. If Demonstration be by Reasons and Arguments evidently to prove, and those Reasons and Arguments to be drawn from a general Experience of the truth of the thing in dispute; then is Astrologie demonstrable, and may lay as large a claim to Demonstration, (as it relates to the first part of the Distinction) as any Art whatsoever.

*Sed verum prius: Ergo, &c.*

This Argument (I conceive) stands in need of no further support, it being grounded so closely on the Definition: or if it should be thought to do so, the following Arguments will strengthen it.

2. That Science which hath been proved certain and true, from the Experience of all ages, cannot but be demonstrable.

But Astrologie hath been so proved: *ergo, &c.*

That Astrologie hath been so proved, I need onely refer you to the Works of those learned men, *Pellagius, Chiron, Argol, Sir Chr. Heyden, Ranzovius, Junstine, Gauricus, Garcius, Origenes, &c.* all which most eminently prove the same, and that as well from their own Experience, as that of the best knowing in former times. Consider further, its certainty in Physick,

*That Astrologie is demonstrable.*

sick, Husbandry, Canicular days ; in Eclipses, in the death of children born in the eighth month, general accidents, *cum multis aliis, &c.* and we need not be beholding to any but our own experience, to prove it demonstrable. I allow, many times errors do happen in Predictions and Calculations also : but this is, *non ex Scientia imbecillitate, sed Professorum.* The Artists ignorance and insufficiency ought not to bring contempt upon the Art. For (as the learned Burton saith) *Ars vera est, sed pauci Artifices reperiuntur.* Besides, there is no Science in the world, that can boast of an absolute perfection, Doth the Logician always prove ? the Rhetorician always persuade ? the Physician always cure ? If no ; I cannot in reason see (as my honoured friend Capt. Wharton, in his *Ephemeris* for 1655. hath learnedly urged it) why Astrologie should be contemned or slighted for want of perfection, more then all other Arts. — “What Geometrician can stand up, and truly tell me, he hath found out the exact Quadrature of a Circle, or the Duplication of a Cube ? What Algebraist can resolve the so long-sought Equation of three discontinued numbers in Algebraick proportion ? and should those noble Sciences therefore be rejected as vain ? — when nevertheless we cannot but confess the most excellent and daily use made of Geometry, both at sea and land : very well knowing that the Geometrician can Square a Circle (though not precisely, yet) so neer exactness, as leaves the issue of his endeavour without sensible error ? Thus far this learned Author. — Now then, if Astrologie (as those other Sciences mentioned) in some trivial things happen to be either dark, or deficient, shall it be deem'd less demonstrable ; whereas in the most eminent and useful parts thereof, Experience proves it certain and serviceable ?

3. The Art which by quotidian experience discovers the reasons of the different fancies, faces and inclinations of men, is demonstrable.

But Astrologie doth so : Ergo, &c.

The Major is unquestionable ; the Minor I fortifie thus. — The reasons of the different fancies and faces, &c. of men, must either be known from the influence of the Stars, or some other way.

But they are discovered no other way whatsoever : Ergo, &c.

Astro-

*That Astrologic is demonstrable.*

Astrologic (which treateth of the influence of the Stars) manifestly appears that those born under *Saturn* are generally heavy of countenance, and of looks unpleasant; of disposition serious, malicious, numerous, and envious, &c. Under *Jupiter*, pleasant and ruddy; faithful, just, prudent, &c. &c. Now if the same kinde of person for description and disposition were born under *Jupiter*, as is under *Saturn*, it were a tolerable Plea against the verity and demonstrability of Astrologic: but that is never so; of which Experience is a grand evidence: Astrologic must therefore be demonstrable. Neither let it be deem'd a reasonable Objection, that in *England* persons born under both Planets are black: for as among Whites, so Blacks, some are more beautiful than others; and as with us, those born under both Planets are white, yet comparatively, the one shall be esteemed black; so one there (though they be all black) shall be deem'd more beautiful than the other. For Beauty and Blackness (in this sense) are so termed, either from the hair or complexion, which in persons both in *Athiopia* and *England* are apparently seen to differ. It is not my business to seek after the Philosophical cause of these differences, here, viz. why we should be White, and the Indians and Ethiopians black; neither doth it mune to my Argument, so long as it is proved, that among Blacks, some are more or less beautiful than others. Let Physicians discuss, Whether the difference between Blacks and Whites proceeds from the different heat of the Sun; or from the paucity or plenty of Sulphur, as the Chymists urge; or from the nature of the Country, or colour of the Seed. Let it (I say) proceed from whether of these causes it will, yet will Astrologic (as it discovers the differences of both landes) appear demonstrable.

The learned *Gassius* hath this passage from *Damascen*, lib. 2. cap. 27. *Alii ex aliis Planetis durescunt complexionibus & habitibus & dispositionibus nobis constituunt.* And it is the opinion of the noble Lord *Bacon*, "That from the predominancies of the Planets, the natures and dispositions of men are (not without much) distinguished. *Advanc. Learn.* p. 352.

That Art by which men are enabled to predict the times of the principal accidents of particular persons (as Preference, Sickness, Death, &c.) is demonstrable.

*That Astrologic is demonstrable.*

But by Astrologic men are enabled to do : *Ergo, Astrologic is demonstrable.*

The Major is not to be denied. The Minor I strengthen thus — That the Stars have an influence upon humane bodies, Physicians and Philosophers grant. That Sickness, Pre-ferment, Death, &c. are accidents both common and proper to men; no one will deny. If then the Stars have an influence on humane bodies, it disposeth them to such and such accidents, at such and such times. Men by Astrologic may therefore come to know them. But I shall be more particular in my proof hereof, both by Authority and Examples. The learned Scotus discoursing of Astrologic, *Lib. 2. de generat. Causis. Hoc modo etiam innoscit; quod qui scire virtutem Signorum, &c. Stellarum in eis positarum dum nascitur, res aliqua, posset predicari de tota vita rei generata, &c.* After this manner it happeneth, that he who knoweth the vertues of the Signes, and the positions of the Stars, may by the Nativity be enabled to discover the accidents of the whole life of any one. But to come to Examples. The learned Dr. Brown (a great enquirer into the truth of these things) was not content to be acquainted with the Theorick, but attempted the Practick part thereof also; and this not in vain; but to the eminent honour of Astrologic: as may appear by what he asserts in *Relig. Med. sect. 23.* — “If (saith he) there be any truth in Astrologic, I may outlive a Jubilee: as yet, I have not seen one Revolution of Saturn, nor hath my Pulse beat thirty years. — And this learned Author hath lived more then a Jubilee, viz. fifty years, and by Experience found the Rules of Astrologic certain. Junoline a Monk predicted his own death. Morinus (late of France) did the same. Gauricus, &c. acquainted Picus Mirandula (who for his fiery zeal in writing against Astrologers, was termed *Flagellum Astrologorum*) that he would die when the Ascendent came to the body of Mars by Direction; which was in the 33 year of his age; and then he died. The Bishop of Vienna Astrologically predicted unto Don Frederick (then serving the Duke of Burgundy) that he should be King of Naples; and this twenty years before it happened. Besides, I can assert it of my own experience, that the Ascendent, Sun or Moon, being directed to the Conjunction, Quartile, or Opposition of Mars, in any of airy Signs; in youth always produce the

*That Astrologie is demonstrable.*

the Small Pox; in grown years, the Feyer or Plague; in old years, or Climacterical or Eneatical years, Death. Chiefly, if *Mars* have any dignities in the eighth or fourth Houses of the Nativity, or in the places of the Luminaries therein.

I had almost forgot, that of late years, the prediction of the King of Sweden's death, and of the King of Denmark's Recovery of his former state and glory, and of the return of our gracious Sovereign, did not meanly exalt the honour of Astrologie, and evince its certainty. *Vide Nuncius Astrologicus*, and the King of Sweden's Nativity, and my Almanack for 1660. May's Observations therein. Thus then it is apparent, that the Minor of this Argument is sufficiently fortified, both by Authority and Experience; and thereby the Consequence made good, — *That Astrologie is demonstrable.*

5. The Art which assisteth us in predicting the grand accidents of the world, (as Wars, Famine, Pestilence, &c.) is demonstrable.

But by Astrologie we are assisted to predict such things: *Ergo, &c.*

The Major is not liable to question. The Minor is thus defended.

If the Stars be causes of such grand accidents, then may men by Astrologie foretell them; they being necessary and certain effects of such causes.

But the Stars are causes of such accidents: *Ergo, &c.*

*Origen* saith, — *Caelum instar libelli expansi est, notis Syderum omnia futura in se scripta continentis.* The learned *Zanchy* speaking of this subject (less obscurely) saith, — *Quaedam extra sunt, quae certam & plerumq; necessariam cum Caelis & Astris habent connexionem, ut sunt res actionesq; omnes in mundo, quae nullo pacto à voluntate proficiscuntur, &c.* That there are certain other things, that have a necessary connexion with the Heavens and Stars, with which our Will is not concerned, viz. Sterility, Fertility, Plague or Sickneses, perturbation of the Air, Commotions of the Elements, Earthquakes, &c. *Vide Zanch. de Astron.*

*Stoephorus* foretold great Mutations to happen in the world in 1524. and they fell out true; albeit that infamous fellow *Aretine*, most unworthily scoffed at him for his labour.

*Regiomontanus* foretold the many and wonderful Changes that

### *That Astrologie is demonstrable.*

that happened in 1588. and this 113 years before, viz. in 1475. It is apparent therefore that the Stars are causes of such accidents; and by Astrologie they may be predicted. And thus the Truth inculcated by the Prosyllogism is made good, — *Astrologie is demonstrable.* I could produce other Examples and Authorities also, (not a few) but my designe being not to write a Treatise, I shall forbear.

6. The Art which acquainteth us how wise men come to be out-witted, strong men to be overcome, rich men to be made poor, &c. is certain and demonstrable.

But Astrologie instructeth us in these things: *Ergo, &c.*

Not to cite any far-fetch'd Examples, as of *Nero, Tully, Julius Caesar, &c.* of whose different Fates, (with the reasons of them) you may read in my *Collectio Geniturarum*; let it be remembered, that the History of our late miserable times is sufficient to furnish us with instances enow, to prove this Argument firm and good. We need remember no more, then wise *Strafford*, glorious *Laurel*, Duke *Hamilton*, &c. and of late, the Kings of *Denmark, Sweden, and Poland*; *Mazarine, Richard Cromwel, Lambert*: (nay, we may take in that pack of hell-bred Miscreants, that sat as Judges upon our gracious Sovereign King *Charles the First*) — All of which, were either Wise, Strong, or Rich; yet could not avoid their being out-witted, overcome, or made poor. Which Examples confirm the Wise-mans words, — *There is a time for every thing*; and *The race is not always to the swift, &c.* although most commonly it happen so. And inasmuch as the several Unhappineses to the several persons mentioned, were Astrologically predicted, (to my knowledge, the most of them have been so) it proveth unto us the more eminently, — That

### *Astrologie is demonstrable.*

And the more demonstrable Astrologie is, the greater is Gods power seen, and made manifest: — for, *The heavens declare the glory of God.* Psal. 19.1.

This book would Astrologic to be  
 Denominable; and now would gladly see  
 The candid-reasoning of its greatest Fo,  
 (In Zeal and Passion) prove it is not so.  
 A Negative is quickly made appear,  
 By him whose brains are like to Battle-Beer:  
 And he that unto REASON is a Stranger,  
 May Prove, and Reprove, without Fear or Danger,  
 And yet, some Zoilus, Negatives, in Schools,  
 Donor admit of Proof, unless from Fools;  
 Who, in despite to Truth, (resolve to outface her)  
 Ose urge Impossible, for to disgrace her.  
 Be therefore silent, Momus; lock thy jaws,  
 That open are set, against Urania's Laws.  
 Astrologic's divine, and of such worth,  
 The Pen of Man's too poor to set it forth.  
 It is an Art, all Mankind may befriend;  
 'Tis Noble in its Name, its Use, its End.

The Collection of Nativities, so oft by me promised, is now  
 delivered from the Press. It contains an hundred and fifty  
 choice Genitures, viz. Princely, Prelatical, Causidical, Physi-  
 cal, Mercatorial, Mathematical; of Short life, Twins, &c. Be-  
 sides of Practical concernment to the Sons of Art. Together  
 with an hundred select Aphorisms, pertaining to Nativities.  
 Intended as a Supplement to the Doctrine of Nativities. The  
 Epistle thereto contains A modest Defence of Astrologic, against  
 the pretences of its common Opposers in these days.

The Art of Astrologic, in all the parts thereof, is taught  
 by the Author of this Book.
